

Estd. 1999

Chhatrapati Shivaji Institute of Technology

Approved by: AICTE, New Delhi | Affiliated to CSVTU, Bhilai

3.2.1 Institution has created an ecosystem for innovations, Indian Knowledge System (IKS), including awareness about IPR, establishment of IPR cell, Incubation centre and other initiatives for the creation and transfer of knowledge/technology and the outcomes of the same are evident

The Institute Innovation Cell and Research and Development Cell at CSIT provides students, research scholars, researchers, subject matter experts, alumni and business professionals a platform for collaboration and generating ideas.

Institute Innovation Cell

The Institute Innovation Cell at CSIT has been established to foster the culture of Innovation in the student fraternity. It is a vibrant platform that has been engaged in organising various programmes focussing on IPR, patent, research avenues, entrepreneurship and emerging trends in technology. The IIC has been awarded for its proactive vibrancy and achievements in the past. The IIC is set up to encourage, inspire and foster new ideas for innovation and entrepreneurial skills among the students.

Research and Development Cell

The Research and Development Cell at CSIT is dedicated to foster acumen for research among the teachers and students. It organises events related to R&D. . . A senior faculty leads the cell with the Director presiding over it. Roles and responsibilities of R&D cell is to coordinate the research activities at the Institute and explore technological developmental opportunities.

Solar Tracker System

Amongst other natural energy sources such as sun, wind and hydro, sun is one of the greatest sources of energy. The solar energy can be utilized by using PV (photovoltaic) panels to convert the solar energy in the sun to electrical energy. For a fixed PV panel, the efficiency of conversion process is low because the PV panel output depends on the amount of sun intensity that hits it directly. Due to continuous change of sun position during the day and throughout season it gives a disadvantage also to fixed panels PV panels to have a maximum power out they have to be aligned perpendicular to sunlight to have a maximum exposure to light intensity, this when solar trackers come in play.

Agriculture Robot

Automation brings comfort to our life. Automation in its pure sense defines any activity that minimizes completed. This project "Agricultural Robot" aims in fulfilling the lack of man power and automate human factor to increase productivity at consistent quality. The main fact is that how fast the process is being the process of seed sowing with low cost.

An innovative idea of our project is to automate the process of sowing crops such as sunflower, baby corn, groundnut and vegetables like beans, lady's finger, pumpkin and pulses like black gram, green gram etc to reduce the human effort and increase the yield. The plantations of seeds are automatically done by using DC motor. The distance between the two seeds are controlled and varied by using Microcontroller. It is also possible to cultivate different kinds of seeds with different distance. When the Robot reaches the end of the field we can change the direction with the help of remote switches. The whole process is controlled by Microcontroller.

Smart Conveyor Unit

The objective of this project is to design a Robot arm, controlled by a microcontroller and interfaced to a computer, to sort out objects, moving on a conveyor belt. In manufacturing companies, a number of objects have to be transported by means of conveyor belts. During this process, these objects are sorted based on the required specifications. This consumes considerable amount of labor. Moreover, it is a monotonous and tedious job, from the worker's viewpoint in many situations, autonomous robots can provide effective solutions to menial or dangerous tasks. In this case, it is desirable to create an autonomous robot that can identify objects and relocate them if the object meets certain criteria. Obviously, when dealing with a large number of objects, this is a very menial task. This is an excellent application for a robot of this type. In this case, to keep costs and design complexity low.

Electric Jack

This project is helpful when the breakdown is occurring during the running condition of vehicle like tyre puncture or any fault and we need to lift the car at that time, so this is very difficult for senior citizens and especially for females to use screw jack due to more effort needed. Our main aim is to reduce the human effort at that time we use automated hydraulic jack, which is work only pressing one switch, which is given on the remote.

The motive behind using motorized system instead of a manual system is the more power produced by the system and simple in design as compared to a hydraulic/pneumatic design. As the hydraulic oil is incompressible, so the lifting capacity is more in comparison with the pneumatic system, which operates on air, which is compressible.

Report

Name of Event: - Introductory Seminar on IPR

Name of the Guest Speaker: Er. Pankaj Agrawal

Organize Club: - IIC Cell

year: 3rd / 5th sem

Date of Conduct: 11/09/2018

Time: 4 PM to 5.30 PM

Venue: - G2

Number of Participant: 76

The primary aim of an Institution Innovation Council (IIC) Cell is to foster a culture of innovation and entrepreneurship among students, within an educational institution. These Cells are typically established as per the guidelines of the Innovation Cell of the Ministry of Education, Government of India, to promote innovation and startup ecosystems in educational institutions across India. Expert talk on, "Introductory Seminar on IPR" organize by the [CSIT, Durg] IIC Cell was a resounding success in fulfilling its objective of fostering entrepreneurial spirit and imparting valuable knowledge to participants. The event served as a catalyst for igniting innovation and entrepreneurship within the college campus, paving the way for a vibrant startup ecosystem. These sessions provided participants with valuable knowledge and practical guidance on building sustainable startups. We extend our heartfelt gratitude to the speakers, and participants who contributed to the success of the workshop.

Report

Name of Event: - IPR Innovators: Protecting Ideas, Propelling Progress

Name of the Guest Speaker: Er. Jitendra Upadhyay

Organize Club: - IIC Cell

Year: 3rd/6th sem

Date of Conduct: 30/12/2020

Time: 4:00 pm to 5:30 pm

Venue: - Online Platform

Number of Participant: 55

The primary aim of an Institution Innovation Council (IIC) Cell is to foster a culture of innovation and entrepreneurship among students, within an educational institution. These Cells are typically established as per the guidelines of the Innovation Cell of the Ministry of Education, Government of India, to promote innovation and startup ecosystems in educational institutions across India. The Webinar on "IPR Innovators: Protecting Ideas, Propelling Progress" organized by the [CSIT,Durg] IIC Cell was a resounding success in fulfilling its objective of fostering entrepreneurial spirit and imparting valuable knowledge to participants. The event served as a catalyst for igniting innovation and entrepreneurship within the college campus, paving the way for a vibrant startup ecosystem. These sessions provided participants with valuable knowledge and practical guidance on building sustainable startups. We extend our heartfelt gratitude to the speakers, and participants who contributed to the success of the webinar.
