

Criteria 1

1. Curricular Planning and Implementation

1.1.1 The institution ensures effective curriculum planning and delivery through a well planned and documented process including Academic calendar and conduct of continuous internal Assessment

Response: Chhatrapati Shivaji Institute of Technology, (CSIT), Durg is a self financing institution and established in 1999 and is affiliated to Chhattisgarh Swami Vivekananda Technical University (CSVТУ), Bhilai. All the UG programs are followed with the curriculum and syllabus framed by the University. The Institute has a standardized educational program for efficient curriculum preparation and implementation according to the following defined framework:

CURRICULUM PLANNING:

The institution develops action plans for effective implementation of the curriculum prescribed by CSVТУ at the starting of the session. This action plan is finalized in a meeting fifteen to twenty days before the commencement of classes. The institutional academic calendar is prepared at the beginning of each semester, including working days, government and local holidays, and an internal assessment and university examination schedule. It is duly approved by Principal. Lesson plans are prepared by each faculty members before the commencement of the academic year. Course files are maintained by each faculty for their respective subjects and are reviewed on a continuous basis by the HOD once in 15 days. Student's attendance and academic progress for individual course is continuously monitored by all faculty members. As per the CSVТУ Syllabus Scheme two class tests are conducted for theory subjects in each semester as per academic calendar. Laboratory manuals are prepared and upgraded so that students are able to perform experiments and also understand theoretical concepts along with their practical applications. The seminars/workshops, assignments and class tests are planned in the academic calendar, carried out and monitored by the HOD. The regular departmental meetings are carried out to assess the delivery process.

CURRICULUM DELIVERY:

Various Innovative Teaching & Learning methodologies are adopted by the faculty members to create the best learning environment for students. –

Teaching and Learning methodologies include :- traditional (Chalk and talk) method , Video lecturing, e- materials (NPTEL) for the benefits of students , MOOCs, Power point Presentation , Group discussion, Industrial visit, Technical model / prototype preparation

IDENTIFICATION OF CURRICULUM GAP:

Gaps in the curriculum are identified through structured feedback on syllabus. It is obtained from Departmental faculty members. For bridging the identified gap in the existing curriculum and enriching it Content beyond Syllabus. Activities are planned and implemented. The students are allowed to visit industries and carry out internship activities.

CURRICULUM ENRICHMENT:

Workshops, Mini projects, Group Discussions, Seminars, and Value Added Courses are conducted. Exposure to new Tools /Simulators, MOOC (NPTEL etc.). /Collaborative Learning (Group Projects, GDs, and Presentations) and Problem Based Learning (PBL Experiments, Case Studies, and Assignments) are in practice

Course Allocation:

Before the commencement of the Semester classes, the heads of the respective departments identifies the competent teachers who can teach the subjects. The selection largely depends on expertise, interest of the teacher and experience. The subject teachers are provided with the course requisite formats..

CURRICULUM PLANNING:

After the allocation is done the respective teachers make lesson plan meticulously with reference to the syllabus and scheme provided by the CSVTU. The lesson planning is done as per the Units of syllabus of course/syllabus of the University WDuring the planning phase, educators conscientiously consider various factors including anticipated challenges, cognitive requirements, and scheduled holidays. The university guidelines provide a rough estimate of the requisite number of lectures for syllabus completion, which serves as a foundational reference. However, the teachers have academic liberty to frame their plans as per the teaching and learning capacities. As the teaching-learning abilities differ; the number of lectures increase or decrease.

CURRICULUM DELIVERY:

The delivery of curriculum stands as a cornerstone in the realm of higher education. Within the domain of CSIT, there exists a dedicated framework to empower educators to efficaciously disseminate the course contents, thereby ensuring the attainment of desired learning outcomes. Employing a blend of conventional pedagogical tools alongside modern resources such as projectors; the teachers employ a diverse array of teaching methodologies aimed at optimizing the learning experience. Furthermore, meticulous documentation in the form of Subject Files and Course Files is maintained to meticulously monitor the delivery of curriculum. To gauge comprehension and mastery, biannual class assessments are administered universally across all subjects, supplemented by assignments crafted to foster experiential learning. Complementing classroom instruction, students partake in industrial visits to bridge theoretical constructs with real-world applications. Additionally, vocational

training, internships, and project work constitute integral components of the curriculum delivery mechanism at CSIT, enriching the educational journey and equipping students with practical skills and industry exposure.

IDENTIFICATION OF THE CURRICULUM GAP:

The CSIT recognises that owing to the University's long administrative process for changing the syllabus, it is the institute's responsibility to identify and bridge the gaps in curriculum. The Head of the department and the subject teacher work in tandem to identify gaps in the curriculum, and within a fortnight of the commencement of the classes, add-on courses are scheduled and notified to the students. These add-on courses help the student fraternity to lean beyond the prescribed syllabus and enrich their knowledge.

CURRICULUM ENRICHMENT:

CSIT ensures several ways to enrich the curriculum. First of all, interdisciplinary teaching is facilitated at interdepartmental level. The Institute encourages experiential learning through projects, internships, vocational training and industry partnerships. Apart from prescribed textbooks, the departments organize guest lectures from professionals to offer practical technical insights. In addition to this, the CSIT also has provision of funding research projects to foster creativity and critical thinking. Furthermore, CSIT's curriculum delivery mechanism includes internships, project work, and vocational training as essential components that enhance students' educational experiences and provide them with real-world knowledge and skills.

MONITORING COURSE DELIVERY AND CONTINUOUS INTERNAL ASSESSMENT:

The Director and the Heads of the respective departments monitor the course delivery, assessment and evaluation. The Heads of the Departments organize regular meetings to know the course coverage so that effective steps are taken timely. The Director convenes monthly review meetings to see the pace of syllabus coverage and the lacunas.

After the Class Tests, the HoDs convene departmental meetings to discuss the performance of students in CTs. The analysis is presented in the Director's meeting for taking required measures.
