

**Department of Artificial Intelligence and Data Science Course Out comes of all courses of
BTech 8th semester AI& DS**

On successful completion of this course, students should be able to

Course	COURSEOUTCOMES	
Advance Data Science D109811(022)	1.	Apply advanced machine learning techniques, including ensemble methods and reinforcement learning, to complex datasets for real-world problem-solving
	2.	Explore and apply cutting-edge topics like Explainable AI, Federated Learning, and Quantum Machine Learning to innovate and advance data science applications.
	3.	Design, implement, and optimize deep learning models using neural network architectures like CNNs, RNNs, and GANs for various applications
	4.	Analyze and forecast time series data using classical models like ARIMA, advanced models like GARCH, and deep learning-based approaches
	5.	Automate and scale data science workflows using AI-driven techniques, AutoML frameworks, and ethical AI

On successful completion of this course, students should be able to

Course	COURSEOUTCOMES	
Multimedia and Computer VisionD109832	1	To know the fundamental video, audio, image, text processing techniques.
	2	Acquire the basic skill of designing video compression, audio compression, image compression, text
	3	compression.
	4	To know the basic techniques in designing video transmission systems: error control and rate control.
	5	To identify basic concepts, terminology, theories, models and methods in the field of computer vision.
